boso classic edition

## Pure elegance, exclusively for doctors

For decades, mechanical blood pressure instruments by boso have stood for highest precision and reliability. Millions of units have left the factory in Jungingen/Germany and are an essential instrument in doctors' offices and hospitals all over the world. In our production we care for highest quality – from the assembly, to calibration to the final inspection of each unit.

The boso classic manometer has always been special to us. The patented 2-in-1 tube system, the Ø 60 mm scale and the classic boso design guarantee perfect handling in every measuring process. A necessary, yet exquisite gem for those doctors who want to bring something special into their day-to-day hospital work. With its modern matt black, timeless matt chrome or exclusive gold-plated looks, the boso classic edition makes a statement for highest quality and design. Available in a zipper pouch, solo or with velcro cuff.

Each manometer is protected against overpressure and equipped with a noncorrosive mechanism, that absorbs even shocks of dropping the instrument. The Physikalisch-Technische Bundesanstalt (the national institute for metrology) has tested boso sphygmomanometers and found boso's shock protection technology outstanding. No damage, no complaints, no repairs – perfect safety. Primarily for the daily use in hospitals and doctors' offices.

Health is a matter of trust.

bp-monitoring is boso.
